SECURE US CONNECTING TO WHAT MATTERS MOST

February 17, 2011 – Morgantown-based security firm Secure US is putting “peace of mind in the palm of your hand” by offering Honeywell’s line of Total Connect services to area customers.

Total Connect brings warnings, alerts and video to your mobile inbox in real-time. The service allows you to remotely keep tabs on your home, your family or your business, and will tailor mobile alerts to only track events that the customer wants. With Total Connect, checking up on the kids is as simple as checking your E-mail.

Total Connect can also tell Secure US customers when their security systems have been armed or disarmed, when motion has been detected around the pool or driveway and send text or video alerts when someone enters or exits the home or business.

Secure US has added the Total Connect services in order to continue its tradition of staying on the cutting edge of security technology. It is this drive for excellence that has the company annually ranked among the Top 100 Security firms in the United States, according to Security Distributing & Marketing Magazine.

Providing top-notch security services in West Virginia, Pennsylvania, Ohio, Kentucky and Maryland, Secure US is one of the fastest growing security companies in the United States. In its many years of business the company has learned that along with a good product, a good security firm must provide its customers with peace of mind through dedicated local customer service and local UL monitoring.
